CUSTOMER VALUE AGREEMENTS

Tailored to Your Site Operations

Keep your operation running at peak efficiency with a Customer Value Agreement (CVA) tailored for your mining operations. Whether it's planned maintenance, components, or powertrain support, our flexible CVA options help you stay ahead of downtime with built-in cost controls and performance guarantees.

Partner with our team to customize a plan that fits your mine site's unique needs – from parts and service to repairs – and unlock the full potential of your equipment investment.

Find The Right CVA For Your Operation

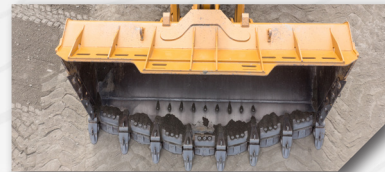

Maintenance For Mining CVA

Get flexible maintenance support to help increase fleet uptime and productivity.

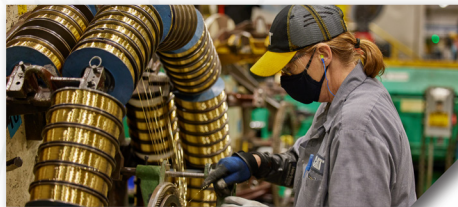

Undercarriage CVA

Choose a maximum-life, hassle-free ownership plan, reducing maintenance intervals and repair costs.

Ground Engaging Tools CVA

Make sure you have the buckets, GET and wire rope you need to meet your productivity goals.

Hose & Coupling CVA

Rely on total-fleet installation and assembly solutions for hydraulic systems for maximum uptime.

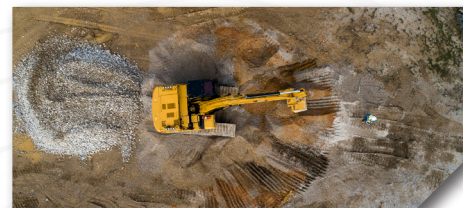

Hydraulic Cylinders & Rods CVA

Get the right parts at the right time, predict repairs, and ensure uninterrupted productivity.

Powertrain Guarantee CVA

Protect critical components and increase peace of mind after the standard machine warranty expires.

Site Performance CVA

Increase productivity, equipment health, and drive sustainable site solutions forward. Plus, customize this CVA to your biggest mining needs.

CAT MINING PARTS & COMPONENTS

To Keep Your Jobsite Moving

Every component of your machine plays a critical role in keeping operations running smoothly. That's why choosing and maintaining the right wear and maintenance parts is essential to your mining success. Genuine Cat parts are engineered to work and wear as a system — helping you minimize downtime and speed up repairs. Because in mining, time isn't just money — it's everything.

Mining Wear Parts with Proven Results

Mining applications are tough on critical machine components. Cat wear parts for mining equipment are proven to deliver the longest life and the lowest total ownership costs in the industry.

CAT UNDERCARRIAGE

Built to last longer and deliver the lowest total cost of ownership, Cat undercarriage meets the mark in every mining application.

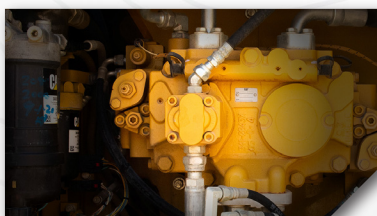

GROUND ENGAGING TOOLS (GET)

Engineered to protect your machine and optimize digging efficiency, Cat GET helps reduce fuel use, extend component life, and lower operating costs. All backed by industry-leading parts availability, and consistent Western States support.

Components That Make a Difference

When it's time to replace a machine component, it's no time to take shortcuts. Genuine Cat components deliver the long-term reliability you need. Whether you buy new or Cat Reman, every Cat component is designed to work as a system within your Cat equipment to maximize performance, efficiency, and lifetime value.

CAT MINING PARTS & COMPONENTS

Increased Productivity and Uptime

Maintenance Parts That Keep You Working

Genuine Cat parts are engineered for your specific equipment and applications. They're built to handle the toughest conditions and keep your machines working reliably, day in and day out.

Don't let the small stuff slow you down – trust the parts that are made to perform.

HOSE & COUPLINGS

We offer a variety of hose types and coupling connections to ensure that you get a quality Cat hydraulic hose assembly for any machine in your fleet.

FILTERS

Cat filters are different – delivering superior protection and performance for your equipment. That means fewer repairs, more uptime, and better results on the job.

FLUIDS

With Cat fluids, your system stays cleaner, your machine performs at its best, and your components last longer. That means less maintenance and more uptime over the long haul.

LINKAGE PINS & BEARINGS

Cat linkage pins and bearings keep your machine, and your work moving, all day. They are designed for outstanding strength and resistance to wear from abrasive and high-load conditions.

REBUILDS KEEP PRODUCTIVE MACHINES ON THE JOB

Extend the Life and Value of Your Equipment

If you're looking at giving your trusted equipment a refresh, a Cat Certified rebuild just makes sense. Each component, system, and machine was built to be rebuilt – part of the added value that comes with your Cat equipment. Take advantage of that extra value and restore your equipment to its original condition for less cost than buying new.

Rebuild a Whole Machine or a Major Component

FULL MACHINE REBUILD

Give your machine a second life with a Cat Certified Rebuild. Each unit is fully disassembled, rebuilt with care, and upgraded with new or remanufactured Cat Parts.

POWERTRAIN

A Powertrain Rebuild replaces around 3,000 components – including engine, transmission, torque converter, final drives, axles, brakes and more—with new or remanufactured Cat parts. This extends your machine's service life and maximizes your return, all at a fraction of the cost of a new powertrain.

MACHINE COMPONENT

Component Rebuilds replace and recondition key systems – like engines, transmissions, axles, torque converters and final drives – while giving you the option to upgrade with the latest engineering. These rebuilds take full advantage of Cat's built-to-be-rebuilt design for long-lasting performance.

HYDRAULIC

A Hydraulic Rebuild restores your hydraulic system to like-new condition by refurbishing or upgrading key components like pumps, motors, hoses, cylinders, and rods. It finishes with a full system check to ensure peak performance in the toughest applications.

ENGINE

An Engine Rebuild restores peak durability and performance to Cat commercial and industrial engines across all applications. We can help you choose the right plan to meet your specific needs.

REPAIR OPTIONS FOR YOUR EQUIPMENT

Repairs and Rebuilds to Keep You Going

Repair Options by Machine Model

ARTICULATED TRUCKS

Choose from planned maintenance parts and kits, or full engine, drivetrain, and hydraulic repair options. Improve safety, performance, and more with a range of upgrades and enhancements for your articulated truck.

TRACK TYPE TRACTORS

Explore undercarriage options for a variety of ground conditions, along with planned maintenance, engine, drivetrain, and hydraulics repairs. Safety, performance and other upgrades are also available for your dozer.

SHOVELS

Electric Rope Shovels: Choose from upgrades like GET, engine repairs, wire rope, and open gear lube maintenance – plus options to boost safety and productivity.

Hydraulic Mining Shovel: Improve performance with a fixed axle roller or next-gen undercarriage, or plan maintenance for the engine, drivetrain, and hydraulics.

OFF-HIGHWAY TRUCKS

Simplify planned maintenance. Find engine, drive train, or hydraulic repairs that balance affordability and turnaround. Opt for upgrades that enhance performance, maintenance, sustainability, and more for your off-highway truck.

WHEEL LOADERS

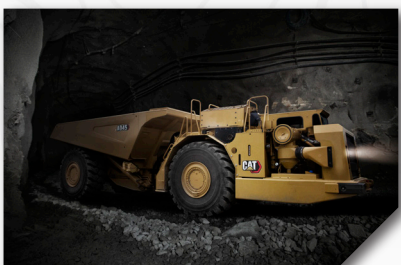

Repair-before-failure maintenance helps ensure the lowest downtime. Engine, drivetrain, and hydraulic repairs are available to fit your business needs. Plan for upgrades when your loader's already in for service.

Repair Options by Machine Model *(continued)*

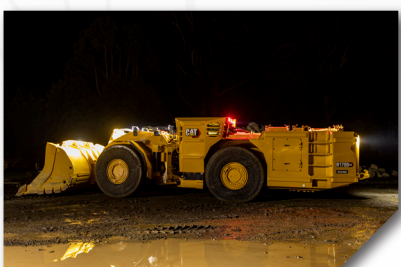

DRILLS

Western States offers comprehensive maintenance and repair solutions for drills, including customized service, component rebuilds, and maintenance kits to maximize uptime and performance.

UNDERGROUND MINING TRUCKS

With flexible repair solutions for underground mining trucks, we'll help keep your fleet running strong. Select from several service options, maintenance kits, and rebuilds.

UNDERGROUND MINING LOAD HAUL DUMP (LHD) LOADERS

Schedule preventative maintenance to keep your LHD loader running at its best performance. With our comprehensive repair solutions, you can select from a range of options for your LHD loader.

MOTOR GRADERS

Select from a range of repair solutions for motor graders, including component repairs, certified rebuilds, and preventative maintenance plans to reduce downtime and extend machine life.

These Are Only a Few of the Options

Want to learn more? Contact our Mining Service Team for more details on all of the maintenance and repair options for your entire fleet.

↳ TECHNOLOGY THAT DRIVES MINING FORWARD

MineStar Fleet™: Total Fleet Control, All In One View

Cat® MineStar Fleet™ is your go-to solution for achieving consistent, predictable performance across your mining operation. As an integrated fleet monitoring and management system, it works with any machine or system – regardless of size or type – to measure, manage, and maximize every aspect of production. Fleet delivers real-time visibility into critical metrics like cycle time, payload, and material blends, empowering managers to make informed decisions quickly. It streamlines operations by minimizing truck wait times, automating fuel scheduling and shift changes, and dynamically reassigning equipment as needs evolve. With automatic haul truck assignments and full operational oversight at a glance, Fleet ensures the right material gets to the right place – on time and on target – helping you hit production goals day after day.

VisionLink®: Smarter Fleet Management Starts Here

VisionLink® simplifies fleet management, making you more powerful than ever. With a streamlined, user-friendly interface, it delivers actionable insights across your entire fleet – regardless of brand. Plan and schedule maintenance with intuitive timeline and calendar views, manage service events with notes and attachments, and create weekly work orders for technicians. Real-time alerts and flexible reporting keep you informed on asset location, fuel levels, machine health issues, and utilization. VisionLink helps you get more done in less time by turning complex data into clear, efficient decisions.

■ PROACTIVE MACHINE HEALTH INSIGHTS ■

For Peak Performance

Condition Monitoring: Smarter Decisions, Better Results

What if you could keep every asset performing at its best – without adding headcount? We can help you with that. We can handle the heavy lifting, tracking asset health and performance so you can focus on running your operation. When issues arise or improvements are possible, you're notified proactively so you can act fast and stay ahead.

Gain Actionable Insights with Condition Monitoring :

- Insights to equipment health with S•O•S Fluid Analysis.
- Proactive maintenance alerts.
- Repair, maintenance, and operation recommendations tailored to your specific site.
- Access detailed records of equipment performance and previous service reports.
- Develop effective, data driven strategic plans for comprehensive maintenance and repair.

Scheduled Oil Sampling (S•O•S) Services

Protect Your Equipment and Maximize Uptime with Cat S•O•S Services
Your equipment is a major investment—keep it running at peak performance with Cat S•O•S Services. Our advanced fluids analysis helps you catch problems early, reduce unexpected downtime, and extend the life of your components. With expert insights backed by Caterpillar engineers and chemists, you can make informed maintenance decisions that save time and money.

Expert Fluid & Fuel Analysis:

Oil Analysis – Identifies wear metals, contaminants, and evaluates fluid condition to monitor engine health.

Coolant Analysis – Assesses cooling system performance to prevent overheating, corrosion, and component damage.

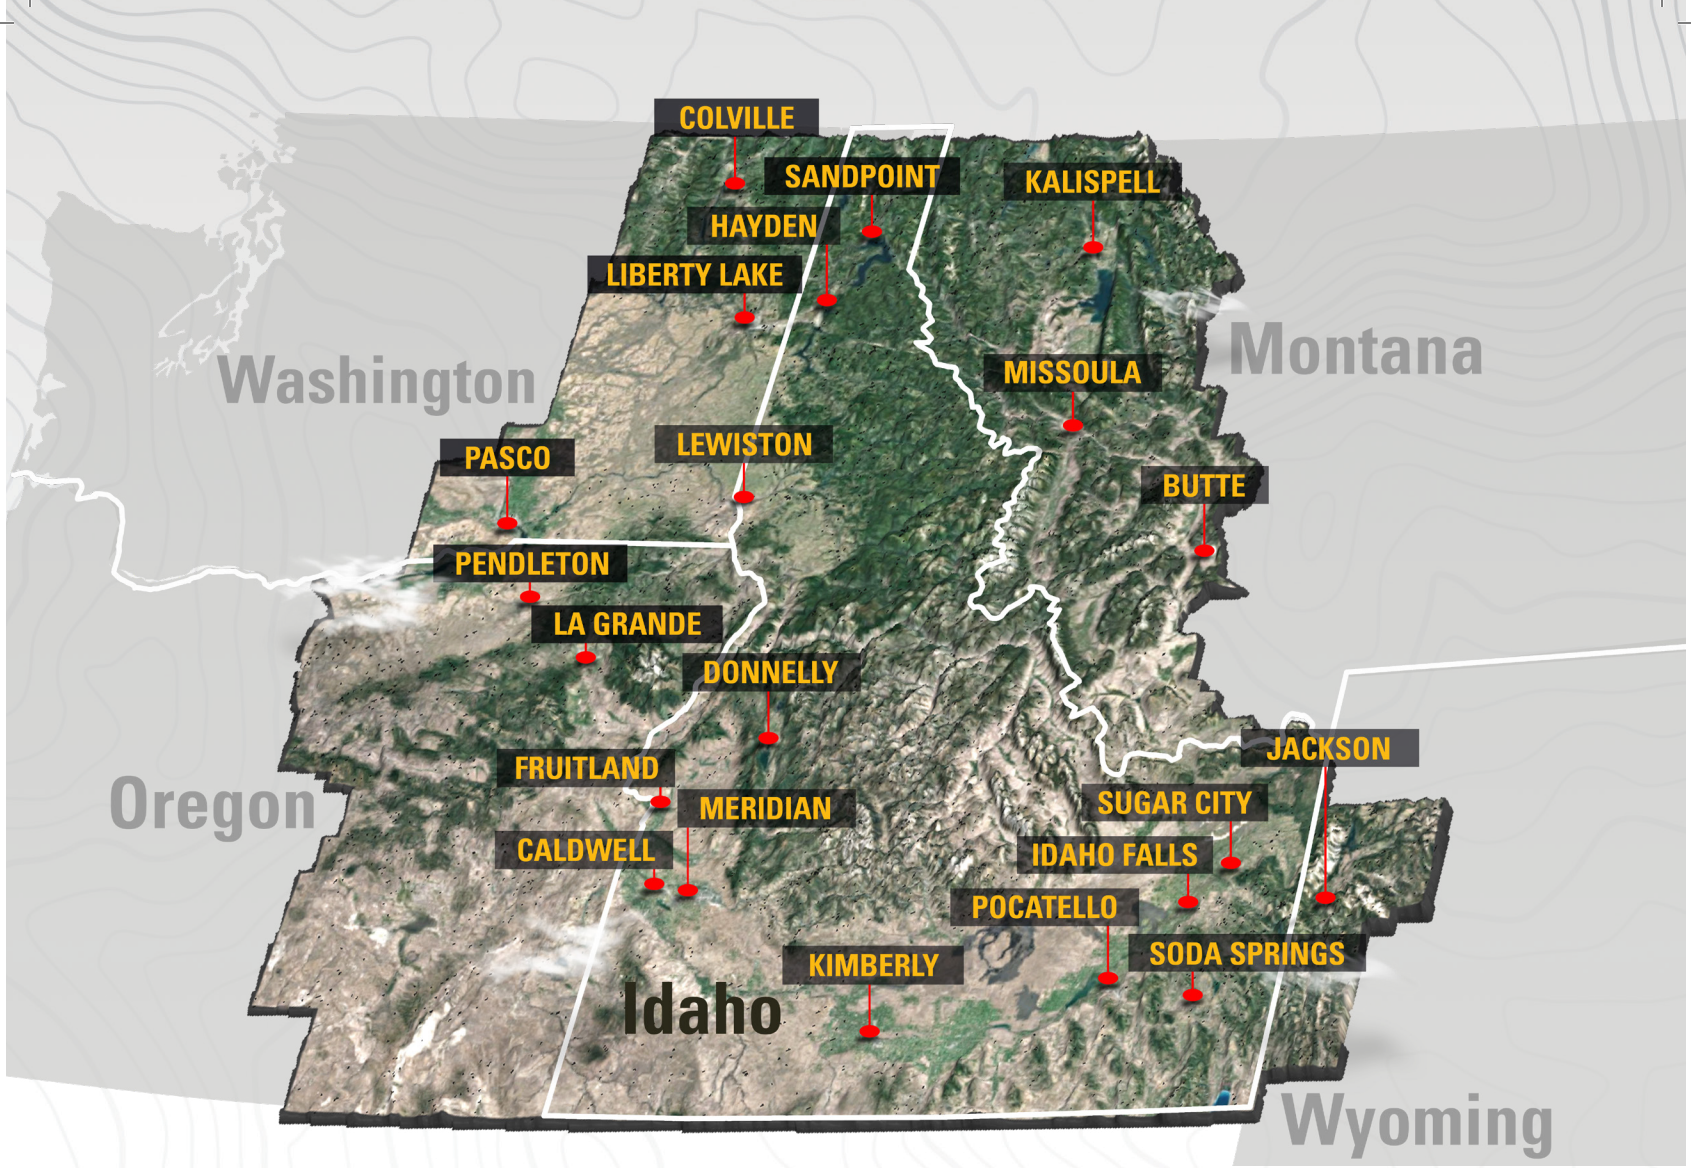

Fuel Testing – Three tiers of testing designed to evaluate storage stability, cold filter plugging potential, and perform verification checks to ensure fuel quality and system reliability.

With S•O•S Services, you get trusted results, advanced trend analysis, and full visibility into equipment – across all brands. Proactive maintenance made simple.
